DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the steps of the method, preferably in the form of a flow chart, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

Art Unit: 3661

2. The disclosure is objected to because of the following informalities: On page 11, line 2, it appears "evaporation" should be --operation--; on page 11, line 2, "flow element 1", refers to a reference number already used for the fuel tank; on page 14, paragraph 1, the specification states "pressure of fuel tank 1 increases and thereby a negative pressure is built up." This does seems to be opposite of what would happen. On page 15, paragraph 2, line 5, "the fuel tank in fuel pump 1" should be --the fuel pump in fuel tank 1--.

Appropriate correction is required.

Allowable Subject Matter

3. Claims 1 through 10 are allowed.

4. The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose performing a tank leak diagnosis by a negative pressure after turning off of the internal combustion engine; and producing the negative pressure in the fuel tank immediately before the turning off of the engine. The closest prior art of record is Hirano et al, 6666072. Hirano et al. maintain negative pressure in the tank throughout engine operation irrespective of whether the engine is about to shut off. Once the engine does shut off, Hirano et al. performs the leak diagnosis. The other ways leak detection are performed in the prior art include using the cooling of the fuel in the tank after the engine shuts down to create the negative pressure, using a separate electric pump after the engine shuts down to change pressure(positive or negative) in the tank, and using negative pressure while the engine is running.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. This application is in condition for allowance except for the following formal matters:

The drawing objections and objections the specification made above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
